## vimrc

Just a simple vimrc

Current Setup: - Basic Plugins & Config: - NERDTree - NERDCommenter - FZF - vim-surround - auto-pairs - vim-gitgutter - lightline - vim-fugitive - ALE - LanguageClientNeovim - echodoc - deoplete - Python: - Pylint linting using ALE - Vim-lsp and pyls for all other language server stuff (IE: Flake8 linting, jedi autocomplete, black and yapf formatting etc). - SimpylFold for folding. - Pydocstring to generate docstrings - Vim-virtualenv for virtualenv support (Don't activate virtualenv outside of vim, install pylint in virtualenv to prevent using system version). - Terraform: - vim-terraform for syntax highlighting and formatting - Ruby: - Vim-lsp and solargraph for linting etc (Probably not the most advanced lsp for Ruby but don't use it enough to bother changing).

Work in Progress: - Haskell Development Plugins
